

Supplementary Figure S2

Leave-one-out sensitivity analysis for bidirectional MR

Panel A: MDD → Anxiety (198 SNPs)

Panel B: Anxiety → MDD (50 SNPs)

● Non-influential SNP (MDD → Anxiety)

● Non-influential SNP (Anxiety → MDD)

● Influential outlier

---- True IVW estimate

Each point represents the IVW causal estimate after removing the indicated SNP.
Influential outliers (highlighted) show $|\Delta OR| > 0.18$ for MDD → Anxiety and > 0.10 for Anxiety → MDD.
No single SNP materially altered the overall causal estimate, supporting result robustness.
