

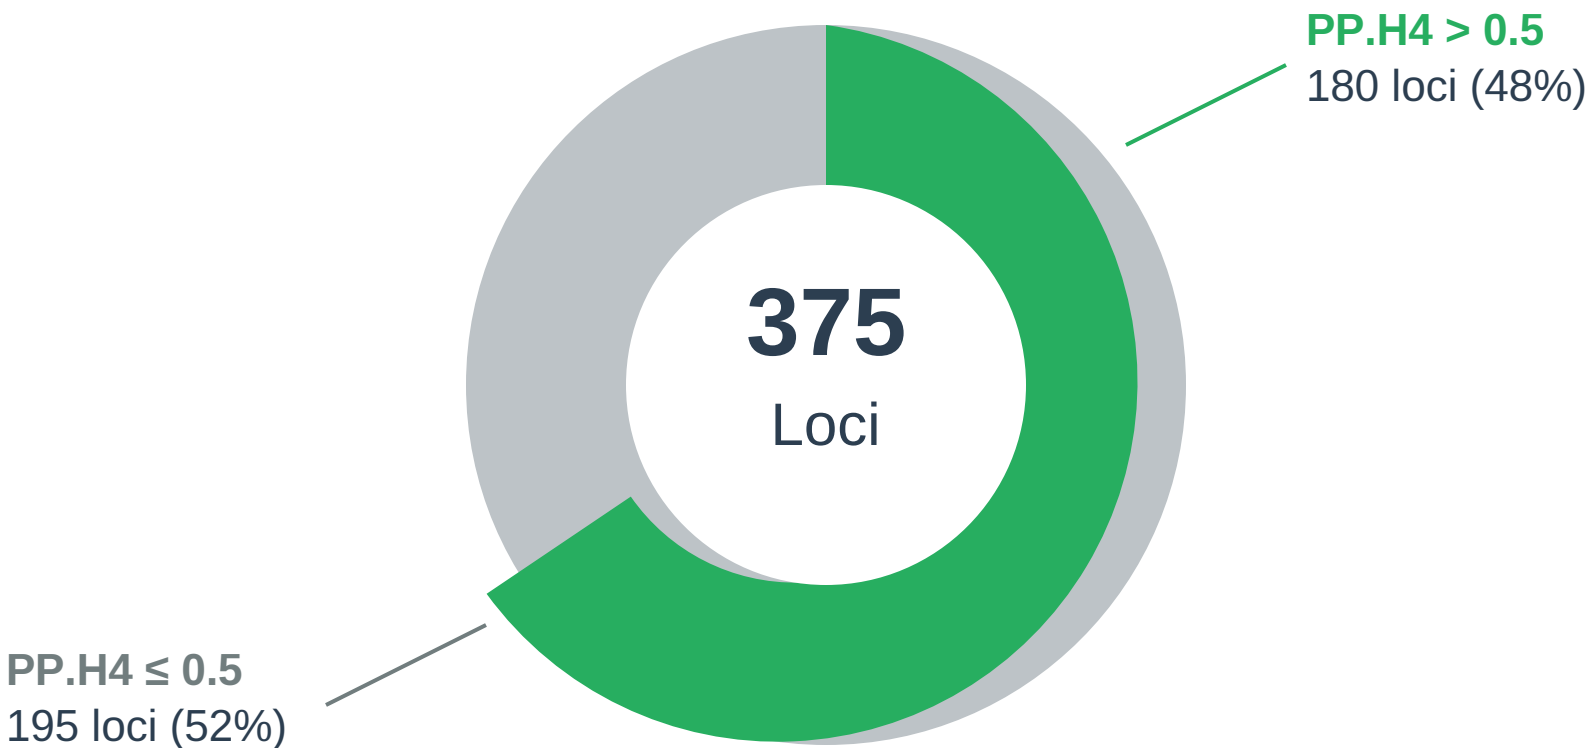

Figure 4

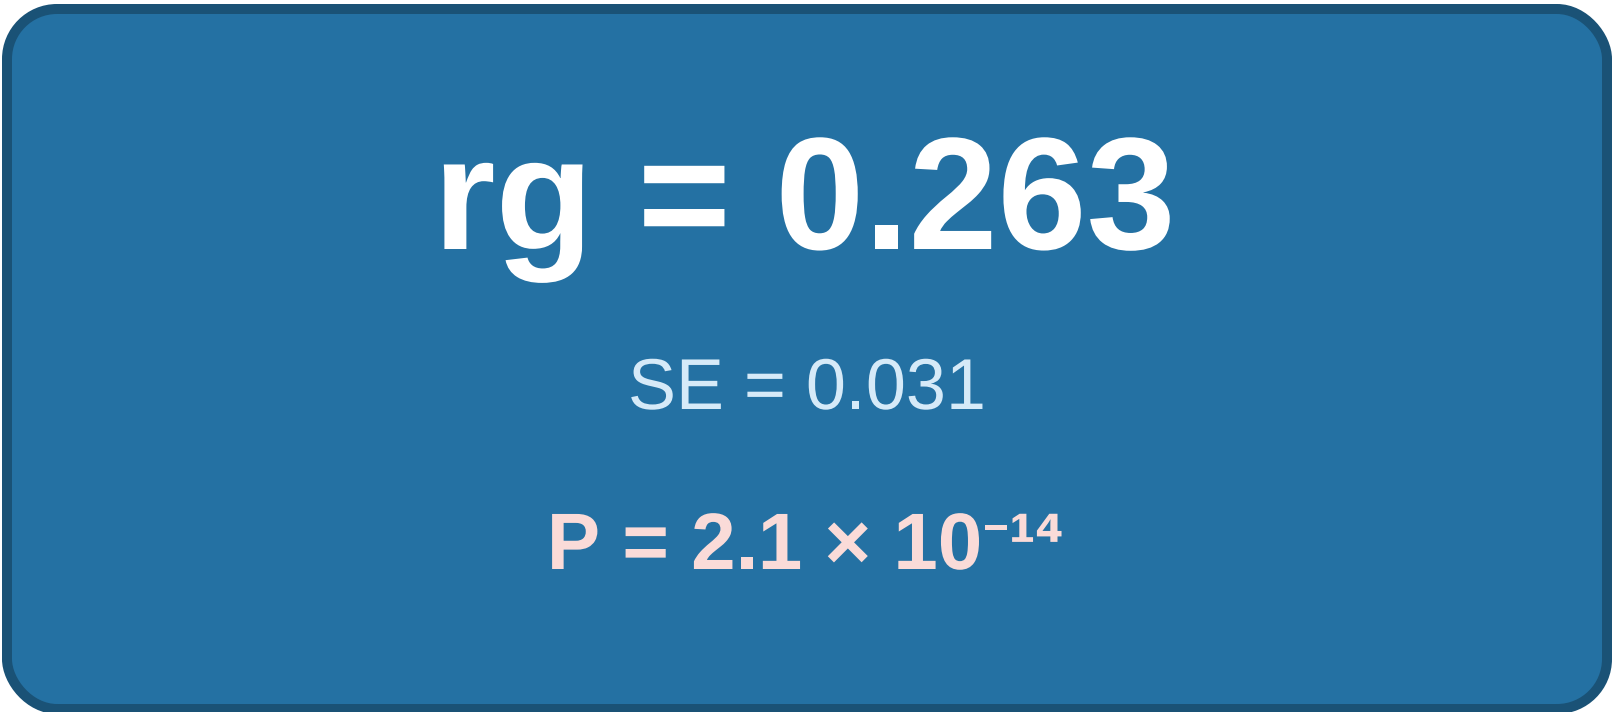

Shared genetic architecture between MDD and anxiety disorders

Panel A: Colocalization

(375 independent loci tested)

Panel B: LDSC Genetic Correlation

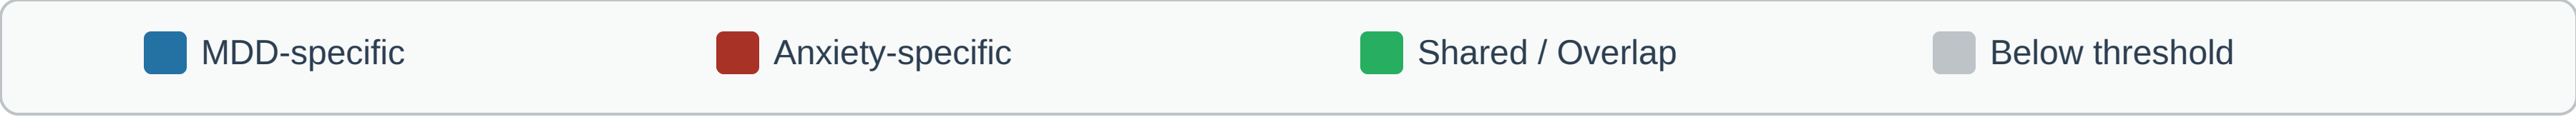

Moderate positive genetic correlation

Panel C: Colocalization Summary

PP.H4 Threshold	Loci (n)	Percentage
PP.H4 > 0.95	11	2.9%
PP.H4 > 0.7	85	22.7%
PP.H4 > 0.5	180	48.0%

Panel D: Functional Annotation

Category	MDD	Anxiety	Shared
Lead SNPs	327	68	—
Significant Genes	5,625	3,627	2,128 (58.7%)
Pathways	64	23	18
Brain eQTL Genes	252	85	72 (84.7%)

Note: Functional annotation results (Panel D) are exploratory and hypothesis-generating, requiring experimental validation. Shared percentages refer to overlap with Anxiety gene set.
